Description

Wild Spiral Experience!

The 24 Inch Diameter 7 Foot Flanged Spiral Tube Slide Supports are specialized structural components designed to support 24-inch diameter spiral tube slide systems in commercial playground environments. Engineered specifically for 7-foot deck height spiral slide configurations, these supports provide essential stability for curved and helical slide layouts.

Unlike straight slide supports, these spiral supports are designed to accommodate the changing angles and load distribution of a spiral tube slide. They help maintain proper alignment, reduce stress on flanged connections, and ensure smooth, safe slide operation.
