Product Image

Description

1-Loop Contemporary Loop Bike Rack Inground (5801S) is the 1-loop inground Contemporary Loop bicycle rack, with a manufacturer-listed nominal overall length of 1 foot 3 inches. The rack uses one-piece steel tube construction, avoiding the need to assemble separate loop members on site.

Loop count	1
Cataloged overall length	1 foot 3 inches
Construction	One-piece 2-3/8 inch O.D. steel tubing
Installation	Inground
Finish choices	Hot-dip galvanized steel or optional powder

	coating

Configuration and alternatives

This rack	1 loops, 1 foot 3 inches, inground
Other capacities	One-, three-, five-, seven-, nine-, eleven- and thirteen-loop models are distinct SKUs
Alternate installation	Surface-mount racks are available under different model codes
Finish choice	Galvanized or optional powder coating is selected at order time

The manufacturer identifies 2-3/8-inch outside-diameter steel tubing and a choice of hot-dip galvanizing or optional powder coating. Inground installation is distinct from the surface-mount family models and requires coordinated footing and paving details. The selected loop count controls the rack footprint and capacity planning, while the exact bicycle parking capacity depends on site arrangement, usable approach space, bicycle geometry and applicable accessibility rules. Preserve pedestrian circulation and bicycle maneuvering clearance around the installation. This is a stand-alone bike rack, not a storage shelter or fixed locking device; bicycles and locks are not included. Other loop-count choices and surface-mounted versions are independently ordered, not accessories bundled with this specific SKU. Color choice is an order option rather than an additional rack.
