specification drawing

The manufacturer specification for the ADA variation identifies 2-3/8-inch outside-diameter steel pipe, capped openings and corrosion-resistant fasteners. The galvanized finish is appropriate for exposed outdoor use; any alternative finish must be verified on the order. The hanger supports site planning around cooking and camping locations, but no grill, light fixture, lantern, electrical service or accessories are represented as included. Review the foundation details and reach requirements on the exact model drawing before installation. This is a site fixture rather than a lighting system.
