Description

Freestanding Play

Bring iconic playground excitement to any space with this 7 ft deck height freestanding spiral metal slide, designed for maximum fun, safety, and durability. Whether you call it a spiral slide, twisty slide, curly slide, or helix slide, this unit delivers a thrilling ride in a compact footprint.

Manufactured in the USA, this one-piece welded aluminum slide stands apart from traditional sectional slides. Its unitized construction eliminates weak joints and mechanical connections, resulting in a safer, stronger, and longer-lasting product. The deep spiral design and high outer walls provide enhanced rider security while maximizing excitement.

Unlike plastic alternatives, this metal playground slide stays cooler in the sun, with testing showing surfaces averaging up to 8° cooler. It also eliminates concerns like UV fading, cracking in cold temperatures, and static buildup—making it ideal for children of all abilities, including those with cochlear implants.

Designed for versatility, this freestanding spiral slide can be used in a wide range of environments including schools, parks, churches, commercial spaces, and even custom architectural installations. It can also be adapted for use as a water slide (flume slide) or indoor feature.
