Description

Versatile Play

Bring big fun to smaller play spaces with this 90° aluminum spiral playground slide chute, designed specifically as a tot slide for younger children. Whether you call it a spiral slide, twisty slide, or helix slide, this compact design delivers an exciting ride while maintaining a safe and controlled descent.

Built from one-piece welded aluminum, this slide eliminates the weak points commonly found in sectional slides. The unitized construction removes mechanical joints, reducing maintenance concerns while improving long-term durability and safety.

The 90-degree spiral design allows for installation in tighter spaces, making it ideal for daycare centers, schools, churches, and backyard play areas. High outer walls and deep spiral geometry help keep riders safely within the slide path, providing added peace of mind for parents and operators.

Unlike plastic slides, this metal spiral slide maintains cooler surface temperatures, resists UV fading, and eliminates issues like cracking in cold weather or static buildup. Its durable finish also offers strong resistance to vandalism, graffiti, and wear.

Whether used as a standalone feature or integrated into a custom playground design, this aluminum spiral tot slide delivers long-lasting performance in a compact footprint.
