Description

Maximum Impact!

Make a statement with this 10 ft deck height aluminum spiral slide, designed for maximum visual impact and an exciting, extended ride experience. This open spiral (helix) slide is ideal for playgrounds that need both performance and efficient use of space.

Built from one-piece welded aluminum, this slide eliminates the weak points found in sectional designs. The unitized construction removes mechanical connections, improving structural strength, reducing maintenance, and ensuring long-term reliability in demanding environments.

The spiral design allows for taller installations without requiring long straight run-outs, making it perfect for schools, parks, churches, and large backyard play systems. High outer walls and deep spiral geometry help keep riders safely contained throughout the ride.

Compared to plastic slides, this metal spiral slide stays cooler in direct sunlight, resists UV

fading, and eliminates cracking in cold weather. It also reduces static buildup and offers superior resistance to vandalism, including graffiti and surface damage.

This model requires a minimum installation space of approximately 70–72 inches in diameter, making it an ideal solution where space is limited but a high-impact feature is desired.
