Description

Increase Durability & Capacity

Built for strength and performance, this Fireman's Aluminum Spiral Slide is designed for 8 ft deck height installations and engineered to accommodate adult use as well as high-traffic environments. Unlike standard playground slides, this model features larger specification components for increased durability and capacity.

Constructed from one-piece welded aluminum, this slide eliminates weak joints and mechanical connections commonly found in sectional designs. The unitized construction enhances structural integrity, reduces maintenance, and ensures long-term reliability in demanding applications.

The open spiral (helix) design delivers a smooth, controlled descent while minimizing the required installation space. High outer walls and deep spiral geometry provide added safety, making it suitable for commercial settings such as parks, camps, training facilities, and multi-

use recreational spaces.

Compared to plastic alternatives, this metal spiral slide stays cooler in direct sunlight, resists UV fading, and eliminates cold-weather cracking. It also reduces static electricity buildup and offers superior resistance to vandalism, including graffiti and surface damage.

This model requires a minimum installation space of approximately 72–74 inches in diameter, making it a compact yet powerful solution for projects requiring higher capacity and durability.
