Description

High Impact Slide

Built for maximum performance and durability, this Fireman's Aluminum Spiral Slide is designed for 10 ft deck height installations and engineered to support adult use and high-traffic environments. With reinforced components and larger specifications than standard playground slides, this model is ideal for demanding commercial applications.

Constructed from one-piece welded aluminum, this slide eliminates weak joints and mechanical connections found in sectional designs. The unitized construction enhances structural strength, reduces maintenance requirements, and ensures long-term reliability under heavy use.

The open spiral (helix) design provides an extended, exciting ride while minimizing the installation footprint. High outer walls and deep spiral geometry help keep riders safely contained, making this slide suitable for parks, camps, commercial playgrounds, and multi-use

recreational facilities.

Compared to plastic slides, this metal spiral slide maintains cooler surface temperatures, resists UV fading, and eliminates cracking in cold weather. It also reduces static buildup and offers superior resistance to vandalism, including graffiti and surface wear.

This model requires a minimum installation space of approximately 72–74 inches in diameter, making it a compact yet powerful solution for large-scale installations.
