Description

Superior Performance

Designed for demanding environments, this Fireman's Aluminum Spiral Slide is built for 11 ft deck height installations and engineered to support adult use and high-traffic applications. Featuring larger, reinforced components, this slide delivers superior durability compared to standard playground models.

Constructed from one-piece welded aluminum, this slide eliminates weak joints and mechanical connections found in sectional designs. The unitized construction enhances structural strength, reduces maintenance, and ensures long-term performance in commercial settings.

The open spiral (helix) design provides a longer, more engaging ride while minimizing the installation footprint. High outer walls and deep spiral geometry help keep riders safely contained, making it ideal for parks, camps, commercial playgrounds, and multi-use

recreational facilities.

Compared to plastic alternatives, this metal spiral slide maintains cooler surface temperatures, resists UV fading, and eliminates cracking in cold weather. It also reduces static buildup and offers strong resistance to vandalism, including graffiti and surface wear.

This model requires a minimum installation space of approximately 72–74 inches in diameter, making it a compact yet powerful solution for large-scale installations.
