Description

Increase Stability & Play

Built for maximum performance and durability, this Fireman's Aluminum Spiral Slide is engineered for 12 ft deck height installations and designed to handle adult use and high-capacity environments.

Unlike standard playground slides, this fireman's chute features larger, reinforced components for increased strength, stability, and long-term reliability. The one-piece welded aluminum construction eliminates weak points found in sectional slides, ensuring superior structural integrity and reduced maintenance over time.

The open spiral (helix) design delivers an exciting ride experience while maintaining a compact footprint. Its deep spiral geometry and high outer walls enhance rider containment and safety, making it ideal for parks, camps, commercial playgrounds, and custom recreational builds.

This slide also outperforms plastic alternatives with cooler surface temperatures, resistance to UV fading, and no risk of cracking in cold conditions. Reduced static buildup and strong resistance to vandalism make it a dependable, low-maintenance solution for long-term use.

For proper installation, the slide requires a minimum space of approximately 72–74 inches in diameter.
