Description

High Quality Investment

Engineered for safety and durability, this 30-inch diameter Aluminum Tube Slide is designed specifically for 5 ft deck height installations, making it ideal for backyard playgrounds, schools, and commercial environments.

The fully enclosed tube design provides superior rider containment, reducing the risk of falls and making it a preferred choice for younger users or elevated platforms. Constructed from high-quality aluminum, this slide resists fading, cracking, and overheating—delivering long-lasting performance in all climates.

Installation is simple with the included flat mounting plate, allowing secure attachment to decks, panels, or structures. Optional adapters are available for specialized mounting needs, including round posts or custom configurations.

In addition to traditional use, straight tube slides can double as crawl tunnels or creative play features, adding versatility to your playground design.

Compared to plastic alternatives, aluminum slides remain cooler in the sun, generate less static, and provide excellent resistance to vandalism and wear—making them a smart, low-maintenance investment.
