Description

Enjoy An Extended Experience!

Built for serious height and performance, this 30-inch diameter Aluminum Tube Slide is designed specifically for 10 ft deck height installations, making it ideal for commercial playgrounds, schools, camps, and premium residential builds.

At this elevation, safety and durability are non-negotiable. The fully enclosed tube design keeps riders securely contained throughout the entire descent, significantly reducing the risk of falls while delivering a smooth, controlled ride experience.

With a longer slide run typically around 20 feet, this model creates a more exciting, extended ride compared to lower deck heights—making it a standout feature in any playground setup.

Constructed from heavy-duty aluminum, this slide resists cracking, fading, and UV damage while maintaining cooler surface temperatures than plastic alternatives. It also minimizes static

buildup and offers superior resistance to vandalism, including graffiti and heat damage.

Installation is simplified with an integrated flat mounting plate, allowing secure attachment to decks or structures. Optional mounting adapters are available for round posts or custom configurations.

In addition to playground use, this straight tube design can also function as a crawl tunnel or architectural play element, adding versatility to your project.
