The R3 Series Playground utilizes recycled plastic for the new manufacture of structural components. No, not a used playground, but made from reclaimed, post consumer materials. Every pound of recycled plastic lumber equates to 8 recycled milk containers. Helpful to the environment, durable, reliable and safe fun, reimagining play. The lumber boards are UV treated to prevent deterioration from the sun and have the look and feel of wood without the maintenance. Rotting, splitting and splinters are prevented for a minimum of 50 years.
