Description

Perfect Tube Slide Component

The Straight Tube Slide Section – 30 Inch Diameter x 48.5 Inch (Double Bell) is a foundational component used in the construction of commercial tube slide systems. Rotationally molded for strength and consistency, this straight tube section features double bell ends (female-to-female), allowing seamless integration with elbows, curves, spirals, or additional straight sections.

Designed for maximum flexibility in playground design, this tube slide section is commonly used when building straight runs or curved tube slide configurations.
