Description

Maintain Consistent Ride Flow!

The 45 Degree Elbow – 30 Inch Diameter Longsweep is a precision-molded curve section designed for use in 30-inch diameter commercial tube slide systems. This longsweep elbow provides a smooth, gradual 45-degree directional change, helping maintain ride comfort and consistent slide flow.

Engineered for modular tube slide construction, the longsweep design reduces abrupt transitions while allowing creative flexibility in slide layouts. It is ideal for building curved, veer, spiral, or custom tube slide configurations in schools, parks, churches, indoor playgrounds, and community play areas.

Built for durability and long-term performance, this elbow component is suitable for new installations or replacement projects, ensuring reliable integration within existing tube slide systems.
