Description

Perfect Modular Component

The 30 Degree Elbow – 30 Inch Diameter is a precision-molded directional component designed for use in 30-inch diameter commercial tube slide systems. This elbow section provides a smooth 30-degree change in direction, allowing for subtle course adjustments while maintaining consistent slide flow and rider comfort.

Ideal for modular tube slide construction, the 30-degree elbow is commonly used in curved, veer, or custom slide layouts where gradual directional changes are preferred. Its durable design makes it suitable for schools, parks, churches, indoor playgrounds, and community play environments.
