Description

Ideal for Smooth Slid Transitions

The 112 Degree Elbow – 30 Inch Diameter is a precision-molded curve component designed for use in 30-inch diameter commercial tube slide systems. This large-angle elbow provides a dramatic 112-degree directional change, making it ideal for tight turns, compact layouts, and creative slide configurations.

Engineered for smooth internal transitions, the 112-degree elbow maintains consistent slide flow while allowing designers to build spirals, hooks, sharp curves, or custom directional layouts. Its durable construction ensures reliable performance in schools, parks, churches, indoor playgrounds, and community play environments.

Perfect for new installations or replacement applications, this elbow integrates seamlessly with compatible 30-inch tube slide sections to support modular and flexible playground design.
