## Description

### Versatile Design!

The T-Tube – 30 Inch Diameter is a versatile junction component designed for use within 30-inch diameter commercial tube slide and tunnel systems. This three-way connector allows designers to create branching pathways, alternate routes, or transition points within a modular playground layout.

Ideal for tube slides, crawl tunnels, or custom play structures, the T-Tube enables flexible system design while maintaining smooth internal transitions for safe and engaging play. It is commonly used in schools, parks, churches, indoor playgrounds, and community recreation areas where creative configurations are desired.
