Description

4-Way Play Flow!

The 4-Way Intersection – 30 Inch Diameter is a cross-junction component designed for use within 30-inch diameter commercial tube slide and tunnel systems. This four-way connector allows for multi-directional play flow, creating dynamic pathways and expanded layout possibilities within modular playground designs.

Perfect for building branching slide systems, crawl tunnels, and interconnected play routes, the 4-way intersection enhances creativity and movement within a playground structure. It is ideal for schools, parks, churches, indoor playgrounds, and community recreation environments seeking flexible, high-engagement layouts.
