Description

Versatile Transition!

The Junction Box with Bell Top – 30 Inch Diameter is a versatile transition component designed for use within 30-inch diameter commercial tube slide and tunnel systems. Featuring a bell-top connection, this junction box allows for smooth integration with compatible tube sections while creating a central transition or branching point in modular playground layouts.

Ideal for building dynamic slide paths, crawl tunnels, or multi-directional play systems, the junction box enhances design flexibility and play engagement. Its durable construction supports long-term performance in schools, parks, churches, indoor playgrounds, and community recreation areas.
