Description

Secure Connection Point

The 30" Junction Box – 30 Inch Diameter is a central transition component designed for use within 30-inch diameter commercial tube slide and tunnel systems. This junction box creates a secure connection point for multiple tube sections, allowing for expanded slide layouts and modular playground configurations.

Ideal for constructing branching pathways, multi-directional play routes, and custom tube slide designs, the junction box enhances both functionality and visual appeal. Its durable construction supports long-term performance in schools, parks, churches, indoor playgrounds, and community recreation environments.
