Description

Fluid Connection Points!

The Junction Box Flange – 30 Inch Diameter is a structural connection component designed for use with 30-inch diameter commercial tube slide and tunnel systems. This flange provides secure mounting and alignment at junction box connection points, ensuring proper structural integration within modular playground layouts.

Engineered for durability and long-term performance, the junction box flange enhances stability where tube sections connect to junction boxes or structural panels. It is ideal for schools, parks, churches, indoor playgrounds, and community recreation environments requiring dependable slide system components.
