Description

Add Playful Component!

The Spherical Vessel – 48 Inch Diameter with 30 Inch Flange is a dynamic, enclosed playground feature designed to integrate seamlessly with 30-inch diameter tube and tunnel systems. This large spherical component creates a visually striking transition point while expanding interactive play opportunities within modular playground layouts.

With its 48-inch diameter chamber and 30-inch flange connection, the spherical vessel serves as a central hub for crawl tubes, slides, or tunnel systems. It encourages exploration, imaginative play, and physical coordination while providing a spacious interior environment for children.
