Description

Add a Nice Perimeter

The Rock Lock Straight Section is a durable perimeter edging component designed for commercial playground and landscape applications. This straight section provides clean, defined borders around playground areas, helping contain surfacing materials such as engineered wood fiber, rubber mulch, or loose-fill systems.

Engineered for strength and long-term performance, Rock Lock edging enhances playground safety by maintaining proper surfacing depth and preventing material migration. Its straight configuration allows for clean lines and professional installation in schools, parks, churches, daycare centers, and community recreation areas.

Ideal for both new playground installations and resurfacing projects, Rock Lock Straight Sections integrate seamlessly with compatible corner and curved sections to create a secure, finished perimeter.

Note: Minimum order quantity is 24 sections.
