Description

Smooth, Rounded Border Design

The Rock Lock Curved Section is a durable playground perimeter edging component designed to create smooth, rounded borders around commercial play areas. This curved section allows for flexible layout designs while securely containing loose-fill surfacing materials such as engineered wood fiber, rubber mulch, or other impact-attenuating materials.

Engineered for long-term performance, Rock Lock edging helps maintain proper surfacing depth and enhances playground safety by preventing material migration. The curved design allows installers to form clean arcs and rounded corners in schools, parks, churches, daycare centers, and community recreation areas.

Note: Minimum order quantity is 24 sections.
