Description

The Rock Lock End Rock Pack is a finishing component designed to complete and secure the ends of commercial playground edging systems. This pack includes three end pieces and one 18-inch raw steel spike, providing a clean, stable termination point for Rock Lock perimeter installations.

Engineered to maintain surfacing containment and structural stability, the end rock pack helps secure loose-fill materials such as engineered wood fiber or rubber mulch. It ensures a professional, finished appearance in schools, parks, churches, daycare centers, and community recreation areas.

Ideal for new playground installations or resurfacing projects, the Rock Lock End Rock Pack integrates seamlessly with straight and curved edging sections to create a fully secured perimeter system.

Note: Minimum order quantity is 24 packs.
