Description

The Rock Lock End Rock Pack with 28" Spike is a heavy-duty finishing component designed to securely terminate and anchor commercial playground edging systems. This pack includes three end pieces and one 28-inch raw steel spike, providing enhanced ground penetration for increased stability in softer or loose soil conditions.

Engineered to maintain surfacing containment and structural integrity, this end pack helps prevent movement of loose-fill materials such as engineered wood fiber and rubber mulch. The extended 28-inch spike offers superior anchoring depth, making it ideal for demanding installations in schools, parks, churches, daycare centers, and community recreation areas.

Perfect for new playground installations or resurfacing projects, the Rock Lock End Rock Pack integrates seamlessly with straight and curved edging sections to complete a fully secured perimeter system.

Note: Minimum order quantity is 24 packs.
