Description

Classic Style Roof!

The Shingle Roof – Double Wall is a durable, decorative playground roof component designed to enhance both the appearance and functionality of commercial play structures. Featuring a double-wall construction, this roof panel provides added strength, rigidity, and long-term performance in high-traffic outdoor environments.

Designed to simulate a classic shingle-style aesthetic, this roof adds architectural character while offering partial shade and weather protection for elevated playground platforms. It integrates seamlessly into modular playground systems used in schools, parks, churches, daycare centers, and community recreation areas.

Built for commercial durability, the double-wall design improves structural integrity and resistance to weather exposure, making it suitable for both new installations and replacement applications.
