Description

Extended & Durable Slide

The 86 Inch Straight Tube – Single Bell End is an extended commercial-grade tube slide section designed for building straight or curved playground tube slide systems. With its 86-inch length, this component helps reduce the number of connection points while efficiently extending slide runs.

This section features a single bell end, allowing for smooth integration into compatible tube slide components such as elbows, junction boxes, entry panels, and exit chutes. The bell connection helps ensure secure alignment and seamless transitions between sections.
