Description

Commercial Grade Connector

The 30 Degree Flanged Male & Female Entry Elbow – 24 Inch (Not Drilled) is a commercial-grade tube slide connector designed to create a smooth angled transition at the entry point of a 24-inch diameter tube slide system. The 30-degree curve allows for comfortable rider flow while enabling flexible slide alignment from elevated platforms.

This entry elbow features integrated male and female flanged ends but is supplied without pre-drilled mounting holes, providing installers with full flexibility to drill custom mounting patterns based on platform configuration or retrofitting requirements.

Designed for compatibility with modular tube slide systems, this component integrates seamlessly with straight tubes, junction boxes, entry panels, and exit chutes. It is ideal for use in schools, parks, churches, daycare centers, indoor playgrounds, and municipal recreation facilities.
