Description

Smooth Angled Connector

The 30 Degree Flanged Entry Elbow – 24 Inch (Not Drilled) is a commercial-grade tube slide connector designed to create a smooth angled transition at the entry point of a 24-inch diameter tube slide system. The 30-degree curve provides a gradual directional change, improving rider flow while allowing flexible slide layout configurations.

This component features a flanged entry connection and is supplied without pre-drilled mounting holes, offering installers the flexibility to drill custom hole patterns based on specific platform dimensions or retrofit needs.
