Description

Versatile Connector

The 2 Inch Slip-Fit Adjustable Angle Tee – Black is a versatile structural connector designed for use with 2-inch Schedule 40 pipe systems in commercial playground and site installations. This adjustable tee fitting allows installers to create angled connections between pipe sections, providing greater flexibility when designing guardrails, handrails, and custom structural frameworks.

The slip-fit socket design allows pipe sections to slide into place easily, simplifying installation while maintaining a secure structural connection. The adjustable angle feature enables precise positioning and alignment, making it ideal for applications that require non-standard angles.

Finished in black for a clean, professional appearance, this connector is suitable for schools, parks, churches, indoor playgrounds, recreation facilities, and municipal installations. It supports both new construction and replacement applications.
