Description

Stable Pipe Attachment

The 2 Inch Slip-Fit Rectangular Floor Flange – Black is a heavy-duty base connector designed to securely anchor 2-inch Schedule 40 pipe to flat mounting surfaces. This flange provides a stable attachment point for structural pipe components used in commercial playground systems, guardrails, and framework installations.

The slip-fit socket design allows pipe sections to slide directly into the flange for fast and efficient installation. Its rectangular base plate provides a wide mounting surface for improved stability and multiple anchor points when securing to decks, platforms, or concrete surfaces.

Finished in black for a clean, professional appearance, this floor flange is ideal for schools, parks, churches, indoor playgrounds, recreation centers, and municipal installations. It supports both new construction and replacement applications in commercial environments.
