Description

Durable Pipe Connector

The 2 Inch Slip-Fit Extended Coupling – Black is a durable pipe connector designed to join two sections of 2-inch Schedule 40 pipe in commercial playground and structural installations. The extended coupling design provides increased surface contact between pipe sections, helping improve stability and alignment during installation.

The slip-fit connection allows pipe ends to slide directly into the coupling for quick and efficient assembly. This connector is ideal for extending pipe runs in guardrails, handrails, structural frameworks, and modular playground systems.

Finished in black for a clean and professional appearance, the extended coupling integrates seamlessly into structural pipe assemblies used in schools, parks, churches, indoor playgrounds, recreation facilities, and municipal projects.
