Description

Enhance Visibility

The 12 Inch x 24 Inch Tube Slide Window is a fun and functional feature designed to enhance visibility and engagement within enclosed playground tube slides. Installed directly into compatible tube slide sections, this window allows natural light into the slide while providing a viewing point for children and supervisors.

This window panel improves slide safety by increasing visibility inside enclosed tube systems and adds an exciting design element that enhances the overall play experience. It integrates seamlessly into commercial playground tube slide assemblies, including straight and curved tube sections.

Ideal for schools, parks, churches, daycare centers, indoor playgrounds, and municipal recreation facilities, the tube slide window works well for both new slide installations and replacement projects.
