Description

Imaginative Play!

The 5 Foot Crawl Tube – 24 Inch Assembly is a durable playground tunnel designed to encourage exploration, movement, and imaginative play within commercial playground systems. With a 24-inch diameter and 5-foot length, this crawl tube provides a comfortable passage for children while promoting active play and coordination.

Constructed from rotationally molded panels, this crawl tube offers excellent durability, weather resistance, and long-term performance in high-traffic playground environments. The tube comes fully assembled, allowing for efficient installation within modular playground structures or as a connecting tunnel between play elements.

Ideal for schools, parks, churches, daycare centers, indoor playgrounds, and municipal recreation facilities, this crawl tube can be used in both new playground builds and replacement projects.
