Description

Precision Molded Component

The 30 Inch Diameter 30 Degree Long Sweep Elbow is a precision-molded tube slide component designed to create smooth, gradual directional changes in 30-inch diameter commercial tube slide systems. The long sweep design provides a wider turning radius compared to standard elbows, resulting in a more comfortable ride and improved slide flow.

Ideal for building curved slide paths, spiral configurations, and custom layouts, this elbow helps maintain consistent speed while reducing abrupt transitions. It integrates seamlessly with straight tube sections, entry panels, junction boxes, and exit components within modular tube slide systems.
