Description

Perfect to Extend Your Slide

Create smooth, mid-range directional transitions in your playground tube slide system with the 30 Inch 45 Degree Elbow, a precision-molded component designed for 30-inch diameter playground tube slides. This elbow offers a balanced turn radius—ideal for custom slide layouts that require more direction than a 30-degree elbow but less than a full 90-degree turn.

Manufactured for durability in high-use commercial environments, this component is backed by a 10-year limited manufacturer's warranty, providing confidence and long-term reliability. The integrated bell straight connection ensures proper alignment and secure fitting when paired with compatible straight tube sections and other modular slide components.

Suitable for both new playground installations and replacement applications, the 30 Inch 45 Degree Elbow supports creative tube slide designs while maintaining safety and structural integrity.

This 30 Inch 45 Degree Elbow replaces the following models:

- 00127XX – 30? Diameter Tube 45 Degree Elbow
- FP3045SN – Elbow, 30? Diameter Tube × 45° with Bell Straight
- P3045SN0 – Elbow, 45° 30? Diameter with Bell Full Straight
