Description

Smooth Slide Transition

Complete your playground tube slide system with the Flanged Tube Slide Exit, a durable runout component designed for 30-inch diameter tube slides. This slide exit provides a smooth, controlled transition from the enclosed tube to the ground surface, helping ensure proper slide flow and user safety in commercial playground environments.

Designed with a 4-inch overlapping bell, this flanged exit creates a secure, stable connection to compatible tube slide sections. With an overall 39-inch length and a solid 45-pound construction, the slide exit is built for durability and long-term performance in high-traffic playground installations.

Ideal for both new playground builds and replacement applications, this flanged tube slide exit integrates seamlessly with modular tube slide systems and is commonly used to complete spiral and straight tube slide configurations.

This Flanged Tube Slide Exit (30? Diameter) replaces the following models:

- P30RO000 – Slide Run Out, 30? Diameter
- RMP0017XX – Tube Slide Runout, 30?
- 00504XX – Slide Exit Cap
- FP30RO00 – Slide Run Out, 30? Diameter
