Description

Encourage Interactive Play!

Expand design possibilities and create dynamic playground layouts with the Junction Cube, a versatile transition component engineered for playground tunnel and tube systems. Featuring five potential openings, the Junction Cube allows designers to connect multiple tunnels or slides from a single central point, offering exceptional flexibility and creative freedom in playground design.

The Junction Cube works seamlessly alongside T-Tube components, serving as an effective transition point within playground structures. Its multi-opening design supports varied traffic flow while encouraging exploration and interactive play.

Available in a variety of colors, the Junction Cube can be customized to match existing playground themes or branding. Built for commercial playground environments, it offers both durability and adaptability for new installations or replacement applications.

Key Features:

- Five potential openings for flexible tunnel connections
- Ideal transition point for playground tunnels and tube systems
- Compatible with 30-inch diameter playground tunnels
- Works in conjunction with T-Tube components
- Available in a variety of colors
- Supports creative and modular playground designs
- Ideal for commercial playground installations
- Replacement for legacy junction cube components
- Built for durability in high-traffic play environments
