Description

Versatile Transition!

Add movement, choice, and imaginative play to your playground with the T-Tube Polyethylene Tunnel Section, a versatile transition component designed for playground tunnel and tube systems. The T-Tube allows children to travel left or right within a play structure, or it can be capped and used as a lookout, adding visual interest and interactive play value.

Working seamlessly alongside the Junction Cube, the T-Tube serves as an excellent transition point within modular playground designs. Its three-way configuration supports creative layouts and smooth traffic flow, making it ideal for expanding or enhancing existing playground systems.

Manufactured from durable polyethylene and available in a variety of colors, the T-Tube Polyethylene Tunnel Section is well-suited for commercial playground environments, supporting both new installations and replacement applications.

This T-Tube Polyethylene Tunnel Section replaces the following models:

- FPRR3W00 – T-Tube, 3-Way
- 00116XX – T-Tube for Indoor Playground
