Description

Engaging Crawl Through Paths

Tubes are an integral part of any playground system, and the 24 Inch Full 7 Foot Tube provides a long, durable tunnel section ideal for creating engaging crawl-through paths and connections within modular playground designs. Designed for 24-inch (61 cm) diameter playground tunnel systems, this full-length tube supports both play flow and structural continuity.

This straight tunnel section integrates seamlessly with compatible elbows, T-Tubes, and Junction Cubes, making it a versatile choice for expanding existing playground layouts or replacing worn tunnel components. Its extended length allows designers to span greater distances while maintaining smooth travel and consistent alignment.

Available as part of a complete tunnel system offering 24? and 30? (61 cm and 76.2 cm) diameter options, the 24 Inch Full 7 Foot Tube is well-suited for commercial playground environments where durability and flexibility are essential.

Key Features:

- Designed for 24-inch diameter playground tunnel systems
- 7-foot-long straight tube section for extended tunnel runs
- Ideal for connecting transition components or creating crawl-through play
- Compatible with elbows, T-Tubes, and Junction Cubes
- Available within systems offering 24? and 30? diameter options
- Ideal for commercial playground installations
- Built for durability in high-traffic play environments
