Description

Ideal for Extending Tunnels

Tubes are an integral part of any playground system, and the 30 Inch Full 2 Foot Tube provides a durable, modular tunnel section designed for 30-inch (76.2 cm) diameter playground tunnel systems. This straight tube section is ideal for extending tunnel runs, connecting transition components, or replacing worn sections while maintaining consistent fit and alignment.

Engineered for commercial playground environments, this full tube integrates seamlessly with compatible elbows, T-Tubes, and Junction Cubes, supporting creative and flexible playground designs. Its compact 2-foot length makes it especially useful in space-conscious layouts or as a connector between larger tunnel elements.

Available within tunnel systems offering 24? and 30? (61 cm and 76.2 cm) diameter options, the 30 Inch Full 2 Foot Tube is well-suited for both new installations and replacement applications where durability and modularity are essential.

Key Features:

- Designed for 30-inch diameter playground tunnel systems
- 2-foot-long straight tube section
- Ideal for connecting tunnel components or extending layouts
- Compatible with elbows, T-Tubes, and Junction Cubes
- Available within systems offering 24? and 30? diameter options
- Ideal for commercial playground installations
- Built for durability in high-traffic play environments
