Description

Durable Tunnel Section

Tubes are an integral part of any playground system, and the 30 Inch Full 7 Foot Tube provides a long, durable tunnel section designed for 30-inch (76.2 cm) diameter playground tunnel systems. This straight full-length tube is ideal for creating extended crawl-through paths, connecting major transition points, or replacing worn tunnel sections in commercial playground environments.

Engineered for reliability and long-term performance, this tube integrates seamlessly with compatible elbows, T-Tubes, and Junction Cubes, allowing designers to build creative, modular playground layouts while maintaining proper alignment and smooth travel. Its 7-foot length makes it well-suited for spanning larger distances within play structures.

Available within playground tunnel systems offering 24? and 30? (61 cm and 76.2 cm) diameter options, the 30 Inch Full 7 Foot Tube supports both new installations and replacement applications where durability and consistency are essential.

Key Features:

- Designed for 30-inch diameter playground tunnel systems
- 7-foot-long straight tube section
- Ideal for extended tunnel runs and crawl-through play
- Compatible with elbows, T-Tubes, and Junction Cubes
- Available within systems offering 24? and 30? diameter options
- Ideal for commercial playground installations
- Replacement for legacy full tube tunnel components
- Built for durability in high-traffic play environments
