Description

Thrilling Ride Experience

Designed for maximum height and performance, the Aluminum Spiral Slide for 13 Ft Deck Height delivers a thrilling ride while maintaining the highest standards of safety and durability.

Engineered as a one-piece welded aluminum structure, this spiral slide eliminates the risks associated with mechanical connections, ensuring a solid, reliable installation for commercial and high-use environments. Its deep spiral design and high outer walls provide enhanced rider containment, making it ideal for taller playground structures.

Despite its height, the spiral configuration minimizes the required footprint, making it a smart solution for projects where space is limited but vertical impact is desired.

Constructed from premium aluminum, this slide offers superior resistance to UV damage, fading, cracking, and vandalism. Unlike plastic alternatives, it maintains cooler surface

temperatures and significantly reduces static buildup—improving comfort and accessibility for all users.

This slide is suitable for a wide range of applications, including playgrounds, parks, schools, architectural builds, and themed environments, and can be customized to match your project's vision with a variety of powder-coated color options.
