Description

Make an Impact on your Playset

The Aluminum Spiral Slide for 14 Ft Deck Height is engineered for tall playground structures that demand both performance and safety. Designed as a one-piece welded aluminum slide, it eliminates the risks associated with sectional connections while delivering exceptional structural integrity.

At this height, the slide's deep spiral design creates an extended, exciting ride while maintaining a compact footprint—making it ideal for projects where vertical impact is desired without requiring excessive ground space.

Safety is enhanced through high outer walls and controlled spiraling geometry, helping keep riders securely positioned throughout the descent. This makes it suitable for commercial playgrounds, parks, schools, and large custom builds.

Constructed from premium aluminum, this slide resists fading, cracking, and UV damage while maintaining cooler surface temperatures compared to plastic alternatives. It also minimizes static buildup and offers excellent resistance to vandalism, including graffiti and burn damage.

With full customization options available—including color, layout, and integration into themed or architectural environments—this spiral slide is a versatile solution for high-elevation playground designs.
