## Product Image

## Description

### Large Scale Play!

The Aluminum Spiral Slide for 15 Ft Deck Height is engineered for large-scale playground structures where height, durability, and performance are critical.

Constructed as a one-piece welded aluminum slide, this design eliminates weak points found in sectional systems, ensuring long-term structural integrity even in high-traffic commercial environments.

At this elevation, the slide's deep spiral geometry creates an extended, high-energy ride experience while maintaining a compact installation footprint. The high outer walls enhance rider containment, supporting safer descents from elevated platforms. This model is ideal for schools, parks, camps, and large custom playground builds, where a tall, visually impactful slide is required.

Manufactured from premium aluminum, the slide resists UV damage, fading, cracking, and

vandalism. It also maintains cooler surface temperatures compared to plastic slides and significantly reduces static buildup, improving comfort and accessibility.

With full customization options—including color finishes, layout integration, and themed design elements—this slide can be tailored to meet the demands of complex or large-scale projects.

At this height, some installations may also consider enclosed tube slides or embankment slides for additional containment or terrain integration.
