Description

Fast & Exciting Ride

The Aluminum Spiral Slide for 18 Ft Deck Height is engineered for high-elevation playground systems, architectural features, and custom-built environments where performance, durability, and safety are critical.

Constructed as a single-piece welded aluminum structure, this slide eliminates the mechanical joints and connection points that can weaken over time. The result is a long-lasting, low-maintenance slide built for demanding commercial applications.

At 18 feet, this model provides a long, fast spiral descent, offering an exciting ride experience while maintaining rider safety through deep helical turns and high outer containment walls. The spiral design also helps reduce the installation footprint compared to straight slides of similar height.

Aluminum construction provides key advantages:

- Cooler surface temperatures than plastic slides
- No fading or UV degradation
- No cracking in cold climates
- Reduced static electricity buildup
- Strong resistance to vandalism and wear

With custom color options and design flexibility, this slide can be adapted to match themed environments or unique project specifications.

At this elevation, many projects may also evaluate enclosed tube slides or embankment slide designs depending on safety requirements, supervision, and site layout.
