Description

High Elevation Project

The Aluminum Spiral Slide for 22 Ft Deck Height is designed for large-scale, high-elevation projects where safety, engineering, and performance must be carefully integrated.

At this height, slides are no longer standard playground components—they are custom-designed systems requiring expert planning and execution.

This slide features a one-piece welded aluminum construction, eliminating mechanical joints and ensuring maximum structural strength and long-term durability. The spiral (helical) design provides a controlled, extended descent path while minimizing installation footprint.

Common uses include:
- Destination playgrounds and public parks
- Resorts and hospitality environments

- Themed attractions and entertainment venues
- Architectural and indoor installations
- Custom residential estates with supervised use

Critical Design Consideration

At 22 ft deck height, slide design becomes highly specialized. In many applications, enclosed tube slides are recommended due to:

- Increased rider containment
- Reduced fall risk
- Better control of speed and rider positioning

Open spiral slides at this height are typically used only when:

- The environment is supervised
- The installation is custom-engineered
- Safety measures are incorporated into the overall design

Our team works directly with you to determine:

- The most appropriate slide type
- Site-specific safety considerations
- Integration with your structure or terrain

Specifications

- Deck Height: 22 feet
- Slide Type: Spiral (Open Bedway)
- Material: Aluminum
- Construction: One-piece welded design
- Minimum Space Requirement: 70–72 inch diameter
- Finish: TGIC polyester powder-coated
- Use: Commercial / architectural / custom residential
