Description

Falcons Roost natural | UPLAY-019-N

Falcons Roost natural is the natural-palette configuration of the UPLAY-019 playground structure.

The listed configuration is a complete play structure, not an individual slide or climber. Its precise activities, deck elevations, critical fall height, accessible play routes, and installed use zone must be checked against the matching manufacturer layout and installation documents before procurement.

Manufacturer UPLAY structures use powder-coated galvanized steel supports and molded plastic play components. Ground-spike mounting is listed where stated in the exact model line; alternate anchor or in-ground mounting packages must be selected separately when required.

Exact model specification and configuration	Model
